ARON BODISZ

Vienna Graduate School of Finance
Building D4, Room 4.163 Welthandelsplatz 1 A-1020 Vienna, Austria
aron.bodisz@vgsf.ac.at ⋄ +43 (1) 313 36 6216

EDUCATION

Vienna Graduate School of Finance 2021–present
Ph.D. in Finance (expected 2027)
Supervisor: Nikolaus Hautsch
Visiting Alfred Lehar, Haskayne School of Business, University of Calgary September–October 2026

Central European University 2019–2021
M.A. in Economics
Research Assistant to Adam Szeidl and Miklos Koren

Eotvos Lorand University 2015–2019
B.A. in Applied Economics

RESEARCH INTERESTS

Market Microstructure; Decentralized Finance; Market Design

WORKING PAPERS

1. Absorbing the Tail: How Automated Market Makers Affect Limit Order Book Liquidity (Job Market Paper)

   The coexistence of an automated market maker (AMM) with a limit order book (LOB) that trades the same asset raises depth at the top of the book. In a model of competitive liquidity supply, the AMM's fixed pricing function lets its liquidity providers (LPs) break even on average over the orders they serve, while LPs on the LOB break even on the marginal unit at each price. When the AMM has a cost advantage over the LOB, it offers better execution than the LOB for orders above a size cutoff and absorbs the largest orders, which carry the most information. LPs on the LOB thus face less informed order flow and post more depth at every price they quote. On Uniswap v3 and Binance, the AMM's share of orders rises with order size, reaching about 86% *in the largest size bin on ETH–USDC. The launch of PancakeSwap v3, an AMM on Binance's blockchain, raised depth at Binance's best bid and ask by about* 57% *relative to Coinbase's, and the gain shrinks farther down the book, as the model predicts.*

2. The DeFi Dilemma (with Nikolaus Hautsch and Stefan Voigt)

   Blockchains let decentralized finance (DeFi) settle transactions without trusted intermediaries through two building blocks: pre-trade transparency of pending transactions and transaction-fee-based priority. We show that these features expose rent-generating transactions to front-running risk, deterring the transactions on which market efficiency depends. Using block-level data on cross-DEX arbitrage across Uniswap V2 and Sushiswap from December 2020 to November 2024, we find that the atomic arbitrage transaction submitted to the public mempool realizes at most 7% *of the profit available net of transaction fees. The price differences nonetheless close within a block or two, through dark pools and trades hedged on other venues. When the randomly drawn validator of the next block cannot include dark pool transactions, they stay open one block longer. Overcoming these inefficiencies requires reintroducing centralized intermediation, which undermines the foundational premise of DeFi.*

WORK IN PROGRESS

1. What Drives Stablecoin Yields in DeFi Lending Markets? (with Yuan Chen and Min Yang)

PRESENTATIONS

2026
VGSF Conference (Vienna University of Economics and Business, Vienna, Austria);

FNCE Brown Bag Seminar (Haskayne School of Business, Calgary, Canada);
European Winter Meeting of the Econometric Society (University of Warsaw, Warsaw, Poland) (scheduled)

2025
2nd Tech4Finance Conference (Université Paris Dauphine, Paris, France)†;
Joint Research Centre of the European Commission (Ispra, Italy)†;
Oxford-Man Institute of Quantitative Finance (University of Oxford, Oxford, United Kingdom)†;
University of Durham Business School (Durham, United Kingdom)†;
VGSF Conference (Vienna University of Economics and Business, Vienna, Austria)

2024
8th SAFE Market Microstructure Conference (Ludwig Maximilian University, Munich, Germany);
Annual WBS Gillmore Centre Conference (Warwick Business School, London, United Kingdom);
Frontiers in DeFi Workshop (Complexity Science Hub, Vienna, Austria)†;
VGSF Conference (Vienna University of Economics and Business, Vienna, Austria)

2023
VGSF Conference (Vienna University of Economics and Business, Vienna, Austria)

† Presented by a coauthor.

TEACHING EXPERIENCE

Vienna University of Economics and Business
- Paper Reading and Writing (MSc in Quantitative Finance) Winter Semester 2023/24; 2024/25
- Bachelor's Thesis Supervision (BSc in Business and Economics) Summer Semester 2022/23; 2023/24

University of Vienna
- Mathematics I Seminar (BSc in Business Administration) Summer Semester 2025/26

SERVICE

Vienna University of Economics and Business
- Brown Bag Seminar Operative Organizer Winter Semester 2024/25; Summer Semester 2024/25
  Institute for Finance, Banking and Insurance

SUMMER SCHOOLS

Summer School in Market Microstructure 2023
University of Edinburgh Business School, Edinburgh, United Kingdom

SKILLS AND LANGUAGES

Software: Python, Stata, Bash (Linux/Ubuntu), SLURM, Git, LaTeX
Languages: Hungarian (native), English (fluent), German (intermediate)
